Journal of Materials Processing Technology

www.elsevier.com/locate/jmatprotec

Subject Index of Volume 140

AA7075 aluminum alloys
Applying liquid film protection method to solid-state bonding process of AA7075 aluminum alloys, 700
ACLN
Neural network approach to recognize the grid patterns in experimental mechanics, 90
Adaptive slicing
An adaptive slicing approach to modelling cloud data for rapid prototyping, 105
Adaptive-network-based inference system
Study of ductile fracture and preform design of upsetting process using adaptive network fuzzy inference system, 576
Adhesive joints
Analysis of plastic bending of adhesive-bonded sheet metals taking account of viscoplasticity of adhesive, 441
AISI 4140 steel
Study on constitutive relation of AISI 4140 steel subject to large strain at elevated temperatures, 84
Al/SiC-MMC
A study on machinability of Al/SiC-MMC, 711
Al–Mg alloy sheet
Effects of temperature on yield locus for 5083 aluminum alloy sheet, 494
Alumina
A closed form solution for laser drilling of silicon nitride and alumina ceramics, 260
Aluminium alloy
The effect of casting temperature on the properties of squeeze cast aluminium and zinc alloys, 391
Aluminium nitride
Porous AlN ceramic substrates by reaction sintering, 413
Aluminum
Fundamental studies on the incremental sheet metal forming technique, 447
Analysis of variation (ANOVA)
Freeform surface finish of plastic injection mold by using ball-burnishing process, 248
Analytic
Preventing non-uniform shrinkage in open-die hot embossing of PMMA microstructures, 173
Analytical methods
A comparative estimation of the forming load in the deep drawing process, 555
Analytical model
Analytical model for prediction of deformed shape in three-roll rolling process, 471
Anode profile
A material removal analysis of electrochemical machining using flat-end cathode, 264
Anodic polarization curve
The surface characteristics of P/M high-speed steel (ASP 23) multi-cut with wire electrical discharge machine (WEDM), 298
ANOVA
An investigation on the hot extrusion process of magnesium alloy sheet, 6
Aspect ratio
Three-dimensional finite element mesh generation from measured data of a stamping die, 129
Average contact pressure
FEM analysis of contact mechanism in press-forming of lubricant pre-coated steel sheet, 514
Axial crush
Axial crush of hollow cylindrical structures with various polygonal cross-sections. Numerical simulation and experiment, 59

Back pressure
Finite element modeling for chemical mechanical polishing process under different back pressures, 646
Ball end milling
Evaluation of cutter orientations in high-speed ball end milling of cantilever-shaped thin plate, 231
Ball-burnishing process
Freeform surface finish of plastic injection mold by using ball-burnishing process, 248
Base isolation
Hole and lead plug effect on fiber reinforced elastomeric isolator for seismic isolation, 592
Bead geometry
Sensitivity analysis for process parameters influencing weld quality in robotic GMA welding process, 676
Bending
Effect of crease depth and crease deviation on folding deformation characteristics of coated paperboard, 157
Bending rigidity
Determination of forming limit of a structural aluminum tube in rubber pad bending, 487
Bezier and B-spline surfaces
Three-dimensional finite element mesh generation from measured data of a stamping die, 129
Biaxial tensile test
Effects of temperature on yield locus for 5083 aluminum alloy sheet, 494
Blanking
Simulation of sheared edge formation process in blanking of sheet metals, 628
Bonding point
Analytical modified model of the cold bond rolling of unbounded double-layers sheet considering hybrid friction, 622
BPNN
Neural network approach to recognize the grid patterns in experimental mechanics, 90
Bridge-LOM
Automatic fabrication for bridged laminated object manufacturing (LOM) process, 179

Elsevier B.V.
doi:10.1016/S0924-0136(03)00890-2

Buckling
Effect of crease depth and crease deviation on folding deformation characteristics of coated paperboard, 157
Built-up edge
A study on machinability of Al/SiC-MMC, 711
Bulk metal forming
Three-dimensional bulk metal forming simulations under a PC cluster environment, 36
Burnish length
Simulation of sheared edge formation process in blanking of sheet metals, 628
Burr height
Simulation of sheared edge formation process in blanking of sheet metals, 628
Burr minimization
Burr minimizing scheme in drilling, 237

CAD/CAE/CAM
Development of a CAD/CAE/CAM system for a robot manipulator, 100
Camber
An elasto-plastic finite-element analysis of sheet metal camber process, 432
Candle stick drill
Comprehensive analysis of delamination in drilling of composite materials with various drill bits, 335
Cantilever-shaped aluminum
Evaluation of cutter orientations in high-speed ball end milling of cantilever-shaped thin plate, 231
CBN
Characteristics of high speed micro-cutting of tungsten carbide, 352
Ceramics
Evaluation of wear mechanisms of Y-TZP and tungsten carbide punches, 460
Chemical–mechanical polishing
Mechano-chemical polishing of silicon wafers, 373
Finite element modeling for chemical mechanical polishing process under different back pressures, 646
Cladding
The effects of various ceramic–metal on wear performance of clad layer, 682
Cloisonné
Application of mushy/semi-solid joining—Part 3, 163
Cloud data
An adaptive slicing approach to modelling cloud data for rapid prototyping, 105
CO_2 laser alloying
The impact characteristics of Ti–6Al–4V plates hardfacing by laser alloying NiAl + ZrO_2 powder, 197
Cold air
An assessment of the applicability of cold air and oil mist in surface grinding, 224
Cold forging
Influence of the roughness geometry of tool surface and the flow stress of coated solid lubricants on tribo-conditions in cold forging, 25
Cold rolling
Experiment investigation of deep-drawing sheet texture evolution, 509
Modeling and optimization of threading process for shape control in tandem cold rolling, 562
Modeling of the inlet zone in the mixed lubrication situation of cold strip rolling, 569
Cold rolling of thin strip
Effect of rolling parameters on cold rolling of thin strip during work roll edge contact, 535
Color calibration
Neural network approach to recognize the grid patterns in experimental mechanics, 90
Combined technology
The technology combined electrochemical mechanical polishing, 203
Composite materials
Numerical and experimental study on the gravitation and surface tension effects on flow injection in center-gated disks, 167
Evaluation of effective material properties of composite materials using special FEM, 185
Compression
Two analytical models of double-layer clad sheet compression forming based on the upper bound and the slab methods, 604
Compression test
Study on constitutive relation of AISI 4140 steel subject to large strain at elevated temperatures, 84
Conceptual design
Constructing an intelligent conceptual design system using genetic algorithm, 95
Conjugate gradient method
Optimization of loading conditions for tube hydroforming, 520
Constitutive equation
Study on constitutive relation of AISI 4140 steel subject to large strain at elevated temperatures, 84
Densification modelling for nanocrystalline metallic powders, 401
Analysis of plastic bending of adhesive-bonded sheet metals taking account of viscoplasticity of adhesive, 441
Constrain-surface stereolithography
Increased accuracy by using dynamic finite element method in the constrain-surface stereolithography system, 191
Contact area ratio
FEM analysis of contact mechanism in press-forming of lubricant pre-coated steel sheet, 514
Contact pressure
Influence of the roughness geometry of tool surface and the flow stress of coated solid lubricants on tribo-conditions in cold forging, 25
Control
Low-cost infrared sensing system for monitoring the welding process in the presence of plate inclination angle, 668
Conventional drill
Burr minimizing scheme in drilling, 237
Copper
Densification modelling for nanocrystalline metallic powders, 401
Copper-based alloy
Development and characterisation of direct laser sintering Cu-based metal powder, 314
Direct laser sintering of a copper-based alloy for creating three-dimensional metal parts, 368
Core drill
Comprehensive analysis of delamination in drilling of composite materials with various drill bits, 335
Corrosion resistance
Investigation of PVD coating on corrosion resistance of metallic bipolar plates in PEM fuel cell, 688
Coulomb friction
Analytical modified model of the cold bond rolling of unbounded double-layers sheet considering hybrid friction, 622
Crush strength
Axial crush of hollow cylindrical structures with various polygonal cross-sections. Numerical simulation and experiment, 59
Crystallographic orientation
A mesoplasticitiy analysis of cutting friction in ultra-precision machining, 292

Cubic boron nitride (CBN)
Performance evaluation of pure CBN tools for machining of steel, 326
Cup drawing
Hydraulic-pressure-enhanced cup-drawing processes—an appraisal, 70
Cup wheel
Ultra precision grinding of spherical convex surfaces on combination brittle materials using resin and metal bond cup wheels, 217
Current off time
Study of electrical discharge machining technology for slicing silicon ingots, 274
Current on time
Study of electrical discharge machining technology for slicing silicon ingots, 274
I–V curves
The polishing mechanism of electrochemical mechanical polishing technology, 280
Cutter orientation
Evaluation of cutter orientations in high-speed ball end milling of cantilever-shaped thin plate, 231
Cutting dynamics
Surface characterization in ultra-precision machining of Al/SiC metal matrix composites using data dependent systems analysis, 141
Cutting force
A mesoplasticitiy analysis of cutting friction in ultra-precision machining, 292
A study on machinability of Al/SiC-MMC, 711

3D finite element mesh generation
Three-dimensional finite element mesh generation from measured data of a stamping die, 129
3D metal part
Direct laser sintering of a copper-based alloy for creating three-dimensional metal parts, 368
Data dependent systems analysis
Surface characterization in ultra-precision machining of Al/SiC metal matrix composites using data dependent systems analysis, 141
Debinding
Rapid debinding of 316L stainless steel injection moulded component, 397
Deep drawing
Development of simulation code for calculating residual stress distribution in D-I cans produced by both-sided ironing process, 13
Hydraulic-pressure-enhanced cup-drawing processes—an appraisal, 70
A comparative estimation of the forming load in the deep drawing process, 555
Deep-drawing sheet
Experiment investigation of deep-drawing sheet texture evolution, 509
Deformation mechanism
Deformation and material removal rate in polishing silicon wafers, 641
Deformation mode
Study on constitutive relation of AISI 4140 steel subject to large strain at elevated temperatures, 84
Delamination
Effect of crease depth and crease deviation on folding deformation characteristics of coated paperboard, 157
Comprehensive analysis of delamination in drilling of composite materials with various drill bits, 335
Denavit–Hartenberg coordinate transformation
Development of a CAD/CAE/CAM system for a robot manipulator, 100
Design of isolator
Hole and lead plug effect on fiber reinforced elastomeric isolator for seismic isolation, 592
D-I can
Development of simulation code for calculating residual stress distribution in D-I cans produced by both-sided ironing process, 13
Diamond tool
Nano-precision measurement of diamond tool edge radius for wafer fabrication, 358
Diamond turning
An NC tool path translator for virtual machining of precision optical products, 211
Cutting performance of diamond tools during ultra-precision turning of electroless-nickel plated die materials, 308
Die life
Application of numerical simulation for wear analysis of warm forging die, 43
Dielectric constant
Porous AlN ceramic substrates by reaction sintering, 413
Direct laser sintering
Development and characterisation of direct laser sintering Cu-based metal powder, 314
Direct laser sintering of a copper-based alloy for creating three-dimensional metal parts, 368
Discharge energy
Investigation of micro-EDM material removal characteristics using single *RC*-pulse discharges, 303
Dislocation model
Densification modelling for nanocrystalline metallic powders, 401
Distorted element
Efficiency enhancement in sheet metal forming analysis with a mesh regularization method, 616
Double passes
Finite element analysis of strain conditions after equal channel angular extrusion, 583
Double-layer clad sheet
Two analytical models of double-layer clad sheet compression forming based on the upper bound and the slab methods, 604
Drawing force
Simulation of ultrasonic-vibration drawing using the finite element method (FEM), 30
Drilling
Burr minimizing scheme in drilling, 237
Study on wear mechanisms in drilling of Inconel 718 superalloy, 269
Comprehensive analysis of delamination in drilling of composite materials with various drill bits, 335

ECAE
Finite element analysis of strain conditions after equal channel angular extrusion, 583
Eccentric tube nosing process
An analysis of the eccentric nosing process of metal tubes, 530
ECM
Optimization of electrochemical polishing of stainless steel by grey relational analysis, 255
Edge radius
Nano-precision measurement of diamond tool edge radius for wafer fabrication, 358
Effective material property
Evaluation of effective material properties of composite materials using special FEM, 185
Efficiency
Investigation of micro-EDM material removal characteristics using single *RC*-pulse discharges, 303

Elastic deformation
Modeling of the inlet zone in the mixed lubrication situation of cold strip rolling, 569
Elastic–plastic material
Development of simulation code for calculating residual stress distribution in D-I cans produced by both-sided ironing process, 13
Elastohydrodynamic lubrication
Simulation of solidification of lubricant in metal forming, 525
Elasto-plastic
An elasto-plastic finite-element analysis of sheet metal camber process, 432
Elasto-plastic finite element
Study of ductile fracture and preform design of upsetting process using adaptive network fuzzy inference system, 576
Electrical discharge machining
Probability of precision micro-machining of insulating Si_3N_4 ceramics by EDM, 245
Electric-discharge machining
Studies on electric-discharge machining of non-contact seal face grooves, 363
Electrochemical machining
A material removal analysis of electrochemical machining using flat-end cathode, 264
Experimental investigation into electrochemical micromachining (EMM) process, 287
Electrochemical mechanical polishing
The polishing mechanism of electrochemical mechanical polishing technology, 280
Electrochemical polishing
The technology combined electrochemical mechanical polishing, 203
Electrochemical polishing mechanism
The polishing mechanism of electrochemical mechanical polishing technology, 280
Electro-discharge machining
A study on the machining of high-aspect ratio micro-structures using micro-EDM, 318
Electroless-nickel
Cutting performance of diamond tools during ultra-precision turning of electroless-nickel plated die materials, 308
Electropolishing
Optimization of electrochemical polishing of stainless steel by grey relational analysis, 255
Electropolishing (EP)
The effects of electropolishing (EP) process parameters on corrosion resistance of 316L stainless steel, 206
Empirical mode
Sensitivity analysis for process parameters influencing weld quality in robotic GMA welding process, 676
Enamel
Application of mushy/semi-solid joining—Part 3, 163
Evaluation mechanism
Constructing an intelligent conceptual design system using genetic algorithm, 95
Experimental strain analysis
Analysis of plastic bending of adhesive-bonded sheet metals taking account of viscoplasticity of adhesive, 441
Expert system
Development of an applied roll forming pass design expert system based on the shape element idea, 505
Explicit formulation
Deformation and material removal rate in polishing silicon wafers, 641
Extruded aluminum tube
Determination of forming limit of a structural aluminum tube in rubber pad bending, 487
Extrusion
The friction modeling of different tribological interfaces in extrusion process, 49

FEM
FEM analysis of contact mechanism in press-forming of lubricant pre-coated steel sheet, 514
Finite element analysis of strain conditions after equal channel angular extrusion, 583
Fiber reinforced elastomeric isolator
Hole and lead plug effect on fiber reinforced elastomeric isolator for seismic isolation, 592
Fine-grained microstructure
Finite element analysis of strain conditions after equal channel angular extrusion, 583
Finite element analysis
Increased accuracy by using dynamic finite element method in the constrain-surface stereolithography system, 191
Densification modelling for nanocrystalline metallic powders, 401
Study on superplastic blow-forming in a rectangular closed-die, 426
Design of rolling pass schedules to improve grain-size uniformity in thickness, 454
Efficiency enhancement in sheet metal forming analysis with a mesh regularization method, 616
Finite element method (FEM)
Development of simulation code for calculating residual stress distribution in D-I cans produced by both-sided ironing process, 13
Simulation of ultrasonic-vibration drawing using the finite element method (FEM), 30
FE approach and experiments for an axisymmetric micro-yoke part forming using grain element and grain boundary element, 65
Numerical and experimental study on the gravitation and surface tension effects on flow injection in center-gated disks, 167
Modified looping technique for remeshing of forming simulations with free surface folding, 465
Optimization of loading conditions for tube hydroforming, 520
Simulation of solidification of lubricant in metal forming, 525
An analysis of the eccentric nosing process of metal tubes, 530
Simulation of sheared edge formation process in blanking of sheet metals, 628
Finite element modeling for chemical mechanical polishing process under different back pressures, 646
Finite-element modeling
Comparison of asperity flattening under different wavelength models for sheet metal forming, 635
Finite-element simulation
A comparative estimation of the forming load in the deep drawing process, 555
Flatness
A fuzzy algorithm for flatness control in hot strip mill, 123
Flow front
Numerical and experimental study on the gravitation and surface tension effects on flow injection in center-gated disks, 167
Foam
Porous AlN ceramic substrates by reaction sintering, 413
Formability
Fundamental studies on the incremental sheet metal forming technique, 447
Forming
A backward extrusion analysis by the rigid–plastic integralless–meshless method, 19
Forming limit
Determination of forming limit of a structural aluminum tube in rubber pad bending, 487

Forming limit curve
Fundamental studies on the incremental sheet metal forming technique, 447
Forming simulation
An analysis of the eccentric nosing process of metal tubes, 530
Fracture toughness
Spark plasma sintering and in vitro study of ultra-fine HA and ZrO_2–HA powders, 420
Free surface folding
Modified looping technique for remeshing of forming simulations with free surface folding, 465
Friction
A mesoplasticitiy analysis of cutting friction in ultra-precision machining, 292
Comparison of asperity flattening under different wavelength models for sheet metal forming, 635
Friction coefficient
FEM analysis of contact mechanism in press-forming of lubricant pre-coated steel sheet, 514
Lubricity of volatile lubricants in sheet metal rolling, 548
Friction materials
Microstructural characteristics on the surface and subsurface of semimetallic automotive friction materials during braking process, 694
Friction modeling
The friction modeling of different tribological interfaces in extrusion process, 49
Friction variation
Finite element simulation of cold rolling of thin strip, 542
Frictional coefficient
Influence of the roughness geometry of tool surface and the flow stress of coated solid lubricants on tribo-conditions in cold forging, 25
Full film zone
Modeling of the inlet zone in the mixed lubrication situation of cold strip rolling, 569
Fuzzy control
A fuzzy algorithm for flatness control in hot strip mill, 123
Fuzzy regression
Fuzzy regression approach to modelling transfer moulding for microchip encapsulation, 147

Gap
A material removal analysis of electrochemical machining using flat-end cathode, 264
Gas tungsten arc welding
The effects of various ceramic–metal on wear performance of clad layer, 682
Gate location design
Gate location design in injection molding of an automobile junction box with integral hinges, 110
Genetic algorithm
Constructing an intelligent conceptual design system using genetic algorithm, 95
Modeling and optimization of threading process for shape control in tandem cold rolling, 562
Geometrical conditions
Influences of the geometrical conditions of die and workpiece on the barreling formation during forging–extrusion process, 54
Glass
Microformability of optical glasses for precision molding, 379
Glass/meal joining
Application of mushy/semi-solid joining—Part 3, 163
GMA welding process
Sensitivity analysis for process parameters influencing weld quality in robotic GMA welding process, 676
Grain boundary element
FE approach and experiments for an axisymmetric micro-yoke part forming using grain element and grain boundary element, 65
Grain element
FE approach and experiments for an axisymmetric micro-yoke part forming using grain element and grain boundary element, 65
Grain size
Design of rolling pass schedules to improve grain-size uniformity in thickness, 454
Gravitation
Numerical and experimental study on the gravitation and surface tension effects on flow injection in center-gated disks, 167
Gravity casting
The effect of casting temperature on the properties of squeeze cast aluminium and zinc alloys, 391
Grey relational analysis
Optimization of electrochemical polishing of stainless steel by grey relational analysis, 255
Grinding
A study on the grindability of multidirectional carbon fibre-reinforced plastics, 152
Grinding force
A study on the grindability of multidirectional carbon fibre-reinforced plastics, 152
An assessment of the applicability of cold air and oil mist in surface grinding, 224
Groove indentation
Effect of crease depth and crease deviation on folding deformation characteristics of coated paperboard, 157

Hard coating
Synthesis of Ti(C, N, O) coatings by unbalanced magnetron sputtering, 662
Hardfacing
The impact characteristics of Ti–6Al–4V plates hardfacing by laser alloying $NiAl + ZrO_2$ powder, 197
Hardness
An assessment of the applicability of cold air and oil mist in surface grinding, 224
Hesitation effect
Gate location design in injection molding of an automobile junction box with integral hinges, 110
High speed
Characteristics of high speed micro-cutting of tungsten carbide, 352
High-aspect ratio
A study on the machining of high-aspect ratio micro-structures using micro-EDM, 318
High-speed steel
The surface characteristics of P/M high-speed steel (ASP 23) multi-cut with wire electrical discharge machine (WEDM), 298
Hollow cylindrical structure
Axial crush of hollow cylindrical structures with various polygonal cross-sections. Numerical simulation and experiment, 59
Hot embossing
Preventing non-uniform shrinkage in open-die hot embossing of PMMA microstructures, 173
Hot extrusion
An investigation on the hot extrusion process of magnesium alloy sheet, 6
Hot rolling
Surface characteristics of oxide scale in hot strip rolling, 76
Design of rolling pass schedules to improve grain-size uniformity in thickness, 454
Experiment investigation of deep-drawing sheet texture evolution, 509
Hot strip mill
A fuzzy algorithm for flatness control in hot strip mill, 123

Hybrid friction
Analytical modified model of the cold bond rolling of unbounded double-layers sheet considering hybrid friction, 622
Hydraulic-pressure-aided drawing
Hydraulic-pressure-enhanced cup-drawing processes—an appraisal, 70
Hydrodynamic inlet
Modeling of the inlet zone in the mixed lubrication situation of cold strip rolling, 569
Hydroforming
Hydraulic-pressure-enhanced cup-drawing processes—an appraisal, 70
Hydromechanical forming
Hydraulic-pressure-enhanced cup-drawing processes—an appraisal, 70
Hydroxyapatite
Spark plasma sintering and in vitro study of ultra-fine HA and ZrO_2–HA powders, 420

IC packaging
The application of the moment equilibrium model to the offset of pressure center of trimming progressive die in IC packaging machine, 653
Impact vibration
The impact characteristics of Ti–6Al–4V plates hardfacing by laser alloying NiAl + ZrO_2 powder, 197
In vitro testing
Spark plasma sintering and in vitro study of ultra-fine HA and ZrO_2–HA powders, 420
Inconel 718
Study on wear mechanisms in drilling of Inconel 718 superalloy, 269
Incremental forming
Fundamental studies on the incremental sheet metal forming technique, 447
Influence function method
Effect of rolling parameters on cold rolling of thin strip during work roll edge contact, 535
Infrared sensing
Low-cost infrared sensing system for monitoring the welding process in the presence of plate inclination angle, 668
Injection molding
Gate location design in injection molding of an automobile junction box with integral hinges, 110
Injection moulding
Development and characterisation of direct laser sintering Cu-based metal powder, 314
Insulating ceramic
Probability of precision micro-machining of insulating Si_3N_4 ceramics by EDM, 245
Integral hinge
Gate location design in injection molding of an automobile junction box with integral hinges, 110
Integralless method
A backward extrusion analysis by the rigid–plastic integralless–meshless method, 19
Interaction between wheel and rail
Computational model of a Shinkansen train running on the railway structure and the industrial applications, 705
Ironing
Development of simulation code for calculating residual stress distribution in D-I cans produced by both-sided ironing process, 13

Junction box
Gate location design in injection molding of an automobile junction box with integral hinges, 110

KeMulti-EDM grinding process
Fabrication of micro-electrodes by multi-EDM grinding process, 332

316L stainless steel
The effects of electropolishing (EP) process parameters on corrosion resistance of 316L stainless steel, 206
Laminated object manufacturing (LOM)
Automatic fabrication for bridged laminated object manufacturing (LOM) process, 179
Laser burr measurement
Burr minimizing scheme in drilling, 237
Laser drilling
A closed form solution for laser drilling of silicon nitride and alumina ceramics, 260
Layer manufacturing
A new approach of online waste removal process for laminated object manufacturing (LOM), 136
Limit frictional coefficient
Investigation on comparisons between two analytical models of sandwich sheet rolling bonded before rolling, 598
Liquid film protection (LFP)
Applying liquid film protection method to solid-state bonding process of AA7075 aluminum alloys, 700
Liquid-phase sintering
Development and characterisation of direct laser sintering Cu-based metal powder, 314
Localized corrosion (IGC)
The effects of electropolishing (EP) process parameters on corrosion resistance of 316L stainless steel, 206
LOM
A new approach of online waste removal process for laminated object manufacturing (LOM), 136
Long rods
Production of long rods by sequential extrusion of wood powders, 407
Low superheat casting
A vertical-type twin roll caster for aluminum alloy strips, 610
Lubricant pre-coated steel sheet
FEM analysis of contact mechanism in press-forming of lubricant pre-coated steel sheet, 514
Lubrication
An assessment of the applicability of cold air and oil mist in surface grinding, 224
Lubricity of volatile lubricants in sheet metal rolling, 548
Lyophobic fluid
Mechanical properties study and design of a suspension system by considering tension force, 385

Magnesium alloy AZ31
Grain refining of magnesium alloy AZ31 by rolling, 588
Magnesium alloy sheet
An investigation on the hot extrusion process of magnesium alloy sheet, 6
Magnetron sputtering
Synthesis of Ti(C, N, O) coatings by unbalanced magnetron sputtering, 662
Material removal
A material removal analysis of electrochemical machining using flat-end cathode, 264
Deformation and material removal rate in polishing silicon wafers, 641
Material removal mechanism
Investigation of micro-EDM material removal characteristics using single *RC*-pulse discharges, 303
Measured data
Three-dimensional finite element mesh generation from measured data of a stamping die, 129

Measurement
Nano-precision measurement of diamond tool edge radius for wafer fabrication, 358
Mechanical polishing
The technology combined electrochemical mechanical polishing, 203
Mechanical properties
The effect of casting temperature on the properties of squeeze cast aluminium and zinc alloys, 391
Mechano-chemical polishing
Mechano-chemical polishing of silicon wafers, 373
MEMS
Microformability of optical glasses for precision molding, 379
Mesh regularization
Efficiency enhancement in sheet metal forming analysis with a mesh regularization method, 616
Meshless method
A backward extrusion analysis by the rigid–plastic integralless–meshless method, 19
Mesoplasticity
A mesoplasticitiy analysis of cutting friction in ultra-precision machining, 292
Metal extrusion
Development of a remote quick CAE system on sculptured metal extrusion die surface, 116
Metal forming
Rotary straightening of curved shape near both ends of seamless pipe, 500
Metal injection moulding
Rapid debinding of 316L stainless steel injection moulded component, 397
Metal matrix composites
Surface characterization in ultra-precision machining of Al/SiC metal matrix composites using data dependent systems analysis, 141
Metallic bipolar plates
Investigation of PVD coating on corrosion resistance of metallic bipolar plates in PEM fuel cell, 688
Microchip encapsulation
Fuzzy regression approach to modelling transfer moulding for microchip encapsulation, 147
Microcrack
Microstructural characteristics on the surface and subsurface of semimetallic automotive friction materials during braking process, 694
Micro-cutting
Characteristics of high speed micro-cutting of tungsten carbide, 352
Micro-EDM
Investigation of micro-EDM material removal characteristics using single *RC*-pulse discharges, 303
A study on the machining of high-aspect ratio micro-structures using micro-EDM, 318
Micro-electrode
Probability of precision micro-machining of insulating Si_3N_4 ceramics by EDM, 245
Fabrication of micro-electrodes by multi-EDM grinding process, 332
Micromachining
Experimental investigation into electrochemical micromachining (EMM) process, 287
Micro-nozzles
Fabrication of micro-electrodes by multi-EDM grinding process, 332
Microspheres
Porous AlN ceramic substrates by reaction sintering, 413
Microstructure
A study on the machining of high-aspect ratio micro-structures using micro-EDM, 318
Microstructural characteristics on the surface and subsurface of semimetallic automotive friction materials during braking process, 694
Microvoid
Microstructural characteristics on the surface and subsurface of semimetallic automotive friction materials during braking process, 694
Micro-yoke part
FE approach and experiments for an axisymmetric micro-yoke part forming using grain element and grain boundary element, 65
Mill setup
Modeling and optimization of threading process for shape control in tandem cold rolling, 562
Milli-structure forming
FE approach and experiments for an axisymmetric micro-yoke part forming using grain element and grain boundary element, 65
Miniaturization
FE approach and experiments for an axisymmetric micro-yoke part forming using grain element and grain boundary element, 65
Mixed film regime
Modeling of the inlet zone in the mixed lubrication situation of cold strip rolling, 569
Model
The investigation on the prediction of tool wear and the determination of optimum cutting conditions in machining 17-4PH stainless steel, 340
Modelling
Investigation of micro-EDM material removal characteristics using single *RC*-pulse discharges, 303
Finite element simulation of cold rolling of thin strip, 542
Modified looping technique
Modified looping technique for remeshing of forming simulations with free surface folding, 465
Moisture content
Production of long rods by sequential extrusion of wood powders, 407
Mold cavity
Freeform surface finish of plastic injection mold by using ball-burnishing process, 248
Moment equilibrium principle
The application of the moment equilibrium model to the offset of pressure center of trimming progressive die in IC packaging machine, 653
Multidirectional CFRP composites
A study on the grindability of multidirectional carbon fibre-reinforced plastics, 152
Multi-pass bar rolling
Analytical model for prediction of deformed shape in three-roll rolling process, 471
Multi-speed method
An investigation on the hot extrusion process of magnesium alloy sheet, 6
Mushy processing
Application of mushy/semi-solid joining—Part 3, 163

Nano-composites
Spark plasma sintering and in vitro study of ultra-fine HA and ZrO_2–HA powders, 420
Nano-forming
Microformability of optical glasses for precision molding, 379
Nano-precision
Nano-precision measurement of diamond tool edge radius for wafer fabrication, 358
NC tool path
An NC tool path translator for virtual machining of precision optical products, 211

Neural network
A fuzzy algorithm for flatness control in hot strip mill, 123
Newtonian viscous flow
Microformability of optical glasses for precision molding, 379
Non-contact seal
Studies on electric-discharge machining of non-contact seal face grooves, 363
Nonlinear dynamics
Computational model of a Shinkansen train running on the railway structure and the industrial applications, 705
Nonuniformity
Finite element modeling for chemical mechanical polishing process under different back pressures, 646
Numerical analysis
Analysis of plastic bending of adhesive-bonded sheet metals taking account of viscoplasticity of adhesive, 441
Numerical simulation
Application of numerical simulation for wear analysis of warm forging die, 43
NURBS
Efficiency enhancement in sheet metal forming analysis with a mesh regularization method, 616

Online de-cubing
A new approach of online waste removal process for laminated object manufacturing (LOM), 136
On-machine measurement
A study on the machining of high-aspect ratio micro-structures using micro-EDM, 318
Optical products
An NC tool path translator for virtual machining of precision optical products, 211
Optimization
The investigation on the prediction of tool wear and the determination of optimum cutting conditions in machining 17-4PH stainless steel, 340
Optimization of loading conditions for tube hydroforming, 520
Orientation changes
Orientation changes of aluminium single crystals in ultra-precision diamond turning, 346
Orthotropy
Effect of crease depth and crease deviation on folding deformation characteristics of coated paperboard, 157
Oxide scales
Surface characteristics of oxide scale in hot strip rolling, 76

Parallel processing
Three-dimensional bulk metal forming simulations under a PC cluster environment, 36
Pass design
Development of an applied roll forming pass design expert system based on the shape element idea, 505
Passive film
The polishing mechanism of electrochemical mechanical polishing technology, 280
Patch
Efficiency enhancement in sheet metal forming analysis with a mesh regularization method, 616
Pattern recognition
Neural network approach to recognize the grid patterns in experimental mechanics, 90
PC cluster
Three-dimensional bulk metal forming simulations under a PC cluster environment, 36
PEMFC
Investigation of PVD coating on corrosion resistance of metallic bipolar plates in PEM fuel cell, 688
PID control
A fuzzy algorithm for flatness control in hot strip mill, 123
Plane elasticity
Evaluation of effective material properties of composite materials using special FEM, 185
Plane extrusion
Neural network approach to recognize the grid patterns in experimental mechanics, 90
Plastic bending
Analysis of plastic bending of adhesive-bonded sheet metals taking account of viscoplasticity of adhesive, 441
Plastic forming
Lubricity of volatile lubricants in sheet metal rolling, 548
Simulation of sheared edge formation process in blanking of sheet metals, 628
Plate inclination effects
Low-cost infrared sensing system for monitoring the welding process in the presence of plate inclination angle, 668
Point angle
Burr minimizing scheme in drilling, 237
Polygonal cross-section
Axial crush of hollow cylindrical structures with various polygonal cross-sections. Numerical simulation and experiment, 59
Porous materials model
Densification modelling for nanocrystalline metallic powders, 401
Powder
Mechanical properties study and design of a suspension system by considering tension force, 385
Powder compaction
Densification modelling for nanocrystalline metallic powders, 401
Power spectrum analysis
A mesoplasticitiy analysis of cutting friction in ultra-precision machining, 292
Precision engineering
Studies on electric-discharge machining of non-contact seal face grooves, 363
Prediction
The investigation on the prediction of tool wear and the determination of optimum cutting conditions in machining 17-4PH stainless steel, 340
Preform
Study of ductile fracture and preform design of upsetting process using adaptive network fuzzy inference system, 576
Press bonding
Applying liquid film protection method to solid-state bonding process of AA7075 aluminum alloys, 700
Press-forming
FEM analysis of contact mechanism in press-forming of lubricant pre-coated steel sheet, 514
Pressure distribution
Prediction of spread, pressure distribution and roll force in ring rolling process using rigid–plastic finite element method, 478
Pressure spike
Simulation of solidification of lubricant in metal forming, 525
Process design
Design of rolling pass schedules to improve grain-size uniformity in thickness, 454
Process modelling
Fuzzy regression approach to modelling transfer moulding for microchip encapsulation, 147
Profile
Effect of rolling parameters on cold rolling of thin strip during work roll edge contact, 535
Profile and flatness
Finite element simulation of cold rolling of thin strip, 542

Progressive die
The application of the moment equilibrium model to the offset of pressure center of trimming progressive die in IC packaging machine, 653
Punch
Evaluation of wear mechanisms of Y-TZP and tungsten carbide punches, 460
Pure CBN
Performance evaluation of pure CBN tools for machining of steel, 326
PVD
Investigation of PVD coating on corrosion resistance of metallic bipolar plates in PEM fuel cell, 688

Railway structure
Computational model of a Shinkansen train running on the railway structure and the industrial applications, 705
Rapid mould
Development and characterisation of direct laser sintering Cu-based metal powder, 314
Rapid prototyping (RP)
A new approach of online waste removal process for laminated object manufacturing (LOM), 136
Increased accuracy by using dynamic finite element method in the constrain-surface stereolithography system, 191
Direct laser sintering of a copper-based alloy for creating three-dimensional metal parts, 368
Rapid solidification
A vertical-type twin roll caster for aluminum alloy strips, 610
Rate-dependent shear strength
Analysis of plastic bending of adhesive-bonded sheet metals taking account of viscoplasticity of adhesive, 441
Recrystallization
Study on constitutive relation of AISI 4140 steel subject to large strain at elevated temperatures, 84
Design of rolling pass schedules to improve grain-size uniformity in thickness, 454
Recrystallization annealing
Experiment investigation of deep-drawing sheet texture evolution, 509
Rectangular closed-die
Study on superplastic blow-forming in a rectangular closed-die, 426
Remeshing
Modified looping technique for remeshing of forming simulations with free surface folding, 465
Remote quick CAE
Development of a remote quick CAE system on sculptured metal extrusion die surface, 116
Replenishment
Production of long rods by sequential extrusion of wood powders, 407
Residual stress
An assessment of the applicability of cold air and oil mist in surface grinding, 224
Reverse engineering
An adaptive slicing approach to modelling cloud data for rapid prototyping, 105
Rheocasting
A vertical-type twin roll caster for aluminum alloy strips, 610
Rigid plastic FEM
Finite element simulation of cold rolling of thin strip, 542
Rigid–plastic finite element method
Prediction of spread, pressure distribution and roll force in ring rolling process using rigid–plastic finite element method, 478
Rigid–plasticity
A backward extrusion analysis by the rigid–plastic integralless–meshless method, 19
Rigid-viscoplastic finite element method
Three-dimensional bulk metal forming simulations under a PC cluster environment, 36
Ring on disk
Application of numerical simulation for wear analysis of warm forging die, 43
Ring rolling
Prediction of spread, pressure distribution and roll force in ring rolling process using rigid–plastic finite element method, 478
Robot manipulator
Development of a CAD/CAE/CAM system for a robot manipulator, 100
Roll force
Prediction of spread, pressure distribution and roll force in ring rolling process using rigid–plastic finite element method, 478
Roll forming
Development of an applied roll forming pass design expert system based on the shape element idea, 505
Rolling
Lubricity of volatile lubricants in sheet metal rolling, 548
Grain refining of magnesium alloy AZ31 by rolling, 588
Rollover height
Simulation of sheared edge formation process in blanking of sheet metals, 628
Rotary forming
Rotary straightening of curved shape near both ends of seamless pipe, 500
Rotational grinding
Ultra precision grinding of spherical convex surfaces on combination brittle materials using resin and metal bond cup wheels, 217
Rubber pad bending
Determination of forming limit of a structural aluminum tube in rubber pad bending, 487
Rule die
Effect of crease depth and crease deviation on folding deformation characteristics of coated paperboard, 157

Sandwich sheet rolling
Investigation on comparisons between two analytical models of sandwich sheet rolling bonded before rolling, 598
Saw drill
Comprehensive analysis of delamination in drilling of composite materials with various drill bits, 335
Seamless pipe
Rotary straightening of curved shape near both ends of seamless pipe, 500
Search mechanism
Constructing an intelligent conceptual design system using genetic algorithm, 95
Selective laser sintering (SLS)
Direct laser sintering of a copper-based alloy for creating three-dimensional metal parts, 368
Semi-solid processing
Application of mushy/semi-solid joining—Part 3, 163
Sensitivity analysis
Sensitivity analysis for process parameters influencing weld quality in robotic GMA welding process, 676
Sep drill
Comprehensive analysis of delamination in drilling of composite materials with various drill bits, 335
Sequential extrusion
Production of long rods by sequential extrusion of wood powders, 407
Servo voltage
Study of electrical discharge machining technology for slicing silicon ingots, 274

Shape
Finite element simulation of cold rolling of thin strip, 542
Shape element
Development of an applied roll forming pass design expert system based on the shape element idea, 505
Shape optimization
Modeling and optimization of threading process for shape control in tandem cold rolling, 562
Shearing
Effect of crease depth and crease deviation on folding deformation characteristics of coated paperboard, 157
Sheet metal
Fundamental studies on the incremental sheet metal forming technique, 447
Shinkansen train
Computational model of a Shinkansen train running on the railway structure and the industrial applications, 705
Short shot
Gate location design in injection molding of an automobile junction box with integral hinges, 110
Shrinkage
Preventing non-uniform shrinkage in open-die hot embossing of PMMA microstructures, 173
Side spread
Prediction of spread, pressure distribution and roll force in ring rolling process using rigid–plastic finite element method, 478
Silica
Ultra precision grinding of spherical convex surfaces on combination brittle materials using resin and metal bond cup wheels, 217
Silicon carbide
Studies on electric-discharge machining of non-contact seal face grooves, 363
Silicon ingot
Study of electrical discharge machining technology for slicing silicon ingots, 274
Silicon nitride
Probability of precision micro-machining of insulating Si_3N_4 ceramics by EDM, 245
A closed form solution for laser drilling of silicon nitride and alumina ceramics, 260
Silicon wafer
Deformation and material removal rate in polishing silicon wafers, 641
Silicon wafer planarization
Mechano-chemical polishing of silicon wafers, 373
Simulation
Preventing non-uniform shrinkage in open-die hot embossing of PMMA microstructures, 173
Simulation code
Development of simulation code for calculating residual stress distribution in D-I cans produced by both-sided ironing process, 13
Single cell
Investigation of PVD coating on corrosion resistance of metallic bipolar plates in PEM fuel cell, 688
Slab
Two analytical models of double-layer clad sheet compression forming based on the upper bound and the slab methods, 604
Solid lubricants
Influence of the roughness geometry of tool surface and the flow stress of coated solid lubricants on tribo-conditions in cold forging, 25
Solidification
Simulation of solidification of lubricant in metal forming, 525
Solid-state bonding
Applying liquid film protection method to solid-state bonding process of AA7075 aluminum alloys, 700
Solvent extraction
Rapid debinding of 316L stainless steel injection moulded component, 397
Spark gap
Investigation of micro-EDM material removal characteristics using single *RC*-pulse discharges, 303
Spark plasma sintering
Spark plasma sintering and in vitro study of ultra-fine HA and ZrO_2–HA powders, 420
Special FEM
Evaluation of effective material properties of composite materials using special FEM, 185
Specific force
Effect of rolling parameters on cold rolling of thin strip during work roll edge contact, 535
Spread
Analytical model for prediction of deformed shape in three-roll rolling process, 471
Spring-back
An elasto-plastic finite-element analysis of sheet metal camber process, 432
Squeeze casting
The effect of casting temperature on the properties of squeeze cast aluminium and zinc alloys, 391
Stainless steel
The investigation on the prediction of tool wear and the determination of optimum cutting conditions in machining 17-4PH stainless steel, 340
Stamping die
Three-dimensional finite element mesh generation from measured data of a stamping die, 129
Stavax
Performance evaluation of pure CBN tools for machining of steel, 326
316 steel
Optimization of electrochemical polishing of stainless steel by grey relational analysis, 255
Steel reinforced elastomeric isolator
Hole and lead plug effect on fiber reinforced elastomeric isolator for seismic isolation, 592
Step angle
Burr minimizing scheme in drilling, 237
Step drill
Burr minimizing scheme in drilling, 237
Sticking friction
Investigation on comparisons between two analytical models of sandwich sheet rolling bonded before rolling, 598
Stone/metal joining
Application of mushy/semi-solid joining—Part 3, 163
Straightening
Rotary straightening of curved shape near both ends of seamless pipe, 500
Strip casting
A vertical-type twin roll caster for aluminum alloy strips, 610
Subsurface damage
A study on the grindability of multidirectional carbon fibre-reinforced plastics, 152
Mechano-chemical polishing of silicon wafers, 373
Superplastic blow-forming
Study on superplastic blow-forming in a rectangular closed-die, 426
Superplastic forming
Grain refining of magnesium alloy AZ31 by rolling, 588
Surface asperity flattening
Comparison of asperity flattening under different wavelength models for sheet metal forming, 635
Surface error
An adaptive slicing approach to modelling cloud data for rapid prototyping, 105

Surface finish
A study on machinability of Al/SiC-MMC, 711
Surface generation
Surface characterization in ultra-precision machining of Al/SiC metal matrix composites using data dependent systems analysis, 141
Surface quality enhancing technologies
Investigation of PVD coating on corrosion resistance of metallic bipolar plates in PEM fuel cell, 688
Surface roughness
Influence of the roughness geometry of tool surface and the flow stress of coated solid lubricants on tribo-conditions in cold forging, 25
Surface characteristics of oxide scale in hot strip rolling, 76
A study on the grindability of multidirectional carbon fibre-reinforced plastics, 152
Freeform surface finish of plastic injection mold by using ball-burnishing process, 248
Study of electrical discharge machining technology for slicing silicon ingots, 274
Surface tension
Numerical and experimental study on the gravitation and surface tension effects on flow injection in center-gated disks, 167
Mechanical properties study and design of a suspension system by considering tension force, 385
Surface texture
Orientation changes of aluminium single crystals in ultra-precision diamond turning, 346
Surface treatment
Applying liquid film protection method to solid-state bonding process of AA7075 aluminum alloys, 700
Suspension system
Mechanical properties study and design of a suspension system by considering tension force, 385

Taguchi's L18 orthogonal table
Freeform surface finish of plastic injection mold by using ball-burnishing process, 248
Temperature
Production of long rods by sequential extrusion of wood powders, 407
Effects of temperature on yield locus for 5083 aluminum alloy sheet, 494
Texture evolution
Experiment investigation of deep-drawing sheet texture evolution, 509
Thermal conductivity
Porous AlN ceramic substrates by reaction sintering, 413
Thick plate
Design of rolling pass schedules to improve grain-size uniformity in thickness, 454
Thin strip rolling
Finite element simulation of cold rolling of thin strip, 542
Threading
Modeling and optimization of threading process for shape control in tandem cold rolling, 562
Three-roll rolling system
Analytical model for prediction of deformed shape in three-roll rolling process, 471
Ti(CNO)
Synthesis of Ti(C, N, O) coatings by unbalanced magnetron sputtering, 662
Ti–6Al–4V
The impact characteristics of Ti–6Al–4V plates hardfacing by laser alloying NiAl + ZrO_2 powder, 197
Time
A material removal analysis of electrochemical machining using flat-end cathode, 264
Tool flank wear
The investigation on the prediction of tool wear and the determination of optimum cutting conditions in machining 17-4PH stainless steel, 340
Tool wear
Cutting performance of diamond tools during ultra-precision turning of electroless-nickel plated die materials, 308
Performance evaluation of pure CBN tools for machining of steel, 326
Evaluation of wear mechanisms of Y-TZP and tungsten carbide punches, 460
Torsion test
Study on constitutive relation of AISI 4140 steel subject to large strain at elevated temperatures, 84
Transfer moulding
Fuzzy regression approach to modelling transfer moulding for microchip encapsulation, 147
Tribological interfaces
The friction modeling of different tribological interfaces in extrusion process, 49
Tribology
Influence of the roughness geometry of tool surface and the flow stress of coated solid lubricants on tribo-conditions in cold forging, 25
Lubricity of volatile lubricants in sheet metal rolling, 548
Trilinear elastic–plastic material model
Computational model of a Shinkansen train running on the railway structure and the industrial applications, 705
Truing and dressing
Ultra precision grinding of spherical convex surfaces on combination brittle materials using resin and metal bond cup wheels, 217
Tube hydroforming
Optimization of loading conditions for tube hydroforming, 520
Tungsten carbide
Characteristics of high speed micro-cutting of tungsten carbide, 352
Studies on electric-discharge machining of non-contact seal face grooves, 363
Twin roll caster
A vertical-type twin roll caster for aluminum alloy strips, 610
Two barrels
Influences of the geometrical conditions of die and workpiece on the barreling formation during forging–extrusion process, 54
Two-dimensional flow
Simulation of solidification of lubricant in metal forming, 525

Ultra precision grinding
Ultra precision grinding of spherical convex surfaces on combination brittle materials using resin and metal bond cup wheels, 217
Ultra-precision diamond turning
Orientation changes of aluminium single crystals in ultra-precision diamond turning, 346
Ultra-precision machining
Surface characterization in ultra-precision machining of Al/SiC metal matrix composites using data dependent systems analysis, 141
A mesoplasticitiy analysis of cutting friction in ultra-precision machining, 292
Cutting performance of diamond tools during ultra-precision turning of electroless-nickel plated die materials, 308
Performance evaluation of pure CBN tools for machining of steel, 326
Ultrasonic vibration
Simulation of ultrasonic-vibration drawing using the finite element method (FEM), 30
Uniform corrosion
The effects of electropolishing (EP) process parameters on corrosion resistance of 316L stainless steel, 206

Upper bound
Two analytical models of double-layer clad sheet compression forming based on the upper bound and the slab methods, 604

V-die bending
An elasto-plastic finite-element analysis of sheet metal camber process, 432
Vegetable oil
An assessment of the applicability of cold air and oil mist in surface grinding, 224
Velocity field
Application of numerical simulation for wear analysis of warm forging die, 43
Virtual manufacturing
An NC tool path translator for virtual machining of precision optical products, 211
Visualization
Computational model of a Shinkansen train running on the railway structure and the industrial applications, 705
Volatile lubricant
Lubricity of volatile lubricants in sheet metal rolling, 548
von Mises stress
Finite element modeling for chemical mechanical polishing process under different back pressures, 646

Wafer fabrication
Nano-precision measurement of diamond tool edge radius for wafer fabrication, 358
Warm forging
Application of numerical simulation for wear analysis of warm forging die, 43
Warm press forming
Effects of temperature on yield locus for 5083 aluminum alloy sheet, 494
Waste material removal
Automatic fabrication for bridged laminated object manufacturing (LOM) process, 179
Water cluster
Mechanical properties study and design of a suspension system by considering tension force, 385
Water leaching
Rapid debinding of 316L stainless steel injection moulded component, 397
Wavelength decomposition
Surface characterization in ultra-precision machining of Al/SiC metal matrix composites using data dependent systems analysis, 141
3-Wavelength model
Comparison of asperity flattening under different wavelength models for sheet metal forming, 635
Wear and friction
Synthesis of Ti(C, N, O) coatings by unbalanced magnetron sputtering, 662
Wear coefficient
Application of numerical simulation for wear analysis of warm forging die, 43
Wear mechanism
Study on wear mechanisms in drilling of Inconel 718 superalloy, 269
Microstructural characteristics on the surface and subsurface of semimetallic automotive friction materials during braking process, 694
Wear resistance
Evaluation of wear mechanisms of Y-TZP and tungsten carbide punches, 460
The effects of various ceramic–metal on wear performance of clad layer, 682
WEDM
Study of electrical discharge machining technology for slicing silicon ingots, 274
Weld penetration
Low-cost infrared sensing system for monitoring the welding process in the presence of plate inclination angle, 668
Wire drawing
Simulation of ultrasonic-vibration drawing using the finite element method (FEM), 30
Wire electrical discharge machine (WEDM)
The surface characteristics of P/M high-speed steel (ASP 23) multi-cut with wire electrical discharge machine (WEDM), 298
Wood powders
Production of long rods by sequential extrusion of wood powders, 407
Work roll edge contact
Effect of rolling parameters on cold rolling of thin strip during work roll edge contact, 535
Workpiece deflection
Evaluation of cutter orientations in high-speed ball end milling of cantilever-shaped thin plate, 231
WWW
Development of a remote quick CAE system on sculptured metal extrusion die surface, 116

Yield criterion
Effects of temperature on yield locus for 5083 aluminum alloy sheet, 494
Yield locus
Effects of temperature on yield locus for 5083 aluminum alloy sheet, 494
Y-TZP
Evaluation of wear mechanisms of Y-TZP and tungsten carbide punches, 460

Zinc alloy
The effect of casting temperature on the properties of squeeze cast aluminium and zinc alloys, 391
Zirconia
Ultra precision grinding of spherical convex surfaces on combination brittle materials using resin and metal bond cup wheels, 217
Spark plasma sintering and in vitro study of ultra-fine HA and ZrO_2–HA powders, 420
Evaluation of wear mechanisms of Y-TZP and tungsten carbide punches, 460
